Season Greetings & New Year Wishes

by the Executive Committee ISA UP

HAPPY NEW YEAR!

Warm New Year greetings to all Anesthesiologists. As we step into 2026, we request your support in spreading awareness about the vital role of the anesthesia fraternity among the common public through the ISA Uttar Pradesh Table Calendar 2026.

Together, let us showcase our commitment to patient safety, care, and excellence beyond the operating room.

Warm regards,

President

Dr Rajeev Kumar Dubey

Honorary Secretary

Dr Tanmay Tiwari

2026

Spinal anesthesia is a safe and commonly used method to give pain relief during surgeries of the lower part of body. A small amount of local anesthesia drug is given in the lower back, making the lower part of body numb, while the patient remains awake comfortable, and pain free throughout surgery.

SPINAL ANESTHESIA

15	16	17	18	19	20	21
22	23	24	25	26	27	28

Epidural anesthesia provides excellent pain relief after surgery by continuously giving pain-relieving drugs through a small catheter or tube placed in the back. It helps patients breathe better, move early, and recover faster without discomfort. Reduces need for strong pain medicines after surgery

2026

General anesthesia is a safe method that makes the patient fully unconscious during surgery, so that they feel no pain or discomfort. The anesthesiologist carefully delivers breathing and monitoring heart rate, blood pressure, and other vitals through out surgery. Patient wakes up comfortable and pain free after surgery.

The operating room works much like an aircraft cockpit, where every system is checked before takeoff. The anesthesia workstations, like flight instruments continuously monitors vital functions to ensure safety. Skilled anesthesiologists, like pilots, are trained to handle routine care and emergencies calmly and precisely.

Anesthesiologists play a pivotal role not only in Operating room but also in critical care settings (ICU's). They manage seriously ill patients in intensive care units across the world.

They provide lifesaving support and empathic care to the patients and their families during the most critical moments.

2026

Fire safety in the operating room and hospital settings is very important because oxygen, electrical equipment, and surgical tools are used together. Anesthesia teams are specially trained to prevent and manage fire risks. Proper education and safety checks help ensure a safe environment.

During anesthesia, advanced monitors continuously track heart rate, blood pressures, breathing, and oxygen levels of the patients. This allows anesthesiologists to detect even small changes early and act immediately. Such detailed monitoring skills are only possible due to rigorous training achieved by the anesthesiologists. Patient safety is the foremost priority in

Anesthesia.
